

Job Title: Industrial Engineer

What you will be doing:

- Develop new systems and creative ideas to help improve productivity, efficiency, and quality and the reduce the production cost in makeup
- Develop and implement new de-skill methods and improve existing ones
- Implementation of different lean tools (Kanban, Kaizen, 5S, Andon, Gemba, VSM, Visual Mgt)
- Study product requirements and work with department/sections concerned to define how it should be done
- Work with the pre-production team and WSO team to ensure all pre-production and preparation processes are done before the launching of bulk production
- Analyse the new incoming product style together with the technical team to identify which operation can be done differently (Automation and de-skill or new method) to improve the bulk production
- Continuously look for methods to improve changeover time
- Analyse the processes and systems in place in the pre-production department to identify opportunities for improvement
- Design, implement, and/or ensure pre-production dashboards are being updated
- Improve skill matrix of pre-production team

Required Knowledge and Abilities:

- Degree holder in Industrial Engineering/Manufacturing Engineering/Production and Operations Management or other related fields
- Very good level of computer literacy
- Good analytical, problem-solving and numerical skills
- Effective communication skills
- Ability to work in a team

Duration: Full time
