Software Integration Analysts Job Description

Responsibilities:

- Manage a portfolio of projects from initial scoping to final completion.
- Participate in solution design, execution, and delivery of projects to meet a client's requirements and to ensure projects are delivered on-time and in full.
- Collaborate and work with developers and stakeholders to understand the requirements and be able to deliver and fulfil the business needs of customers.
- Manage stakeholder communication or in real terms, speak to clients, understand them, and manage their expectations.
- Follow policies and best practices to define project requirements based on customer's needs.
- Perform root-cause-analysis for issues raised by customer during external testing.
- Understand and action on the required connectivity protocols for each project, where relevant.

Requirements:

- Degree qualified in IT or IT related courses.
- Have Java and or C++ programming knowledge.
- Good written and oral communication skills in English.
- Have good planning, problem management and organisation skills are essential.
- To be able to project manage and understand solution delivery cycles.
- Good interpersonal skills with a strong personality, initiative, drive, and you're proactive and someone who enjoys working in a team.
- A good understanding of business process would be great as well.
